MY WATCHLIST GUIDELINE

1. Introduction

My Watchlist is an account monitoring list created to oversee Member win/loss amounts by setting up thresholds. This way, you can effectively control risks and make more informed decisions.

To access **My Watchlist**, go to **Main Menu > My Watchlist**:

2. Set the thresholds

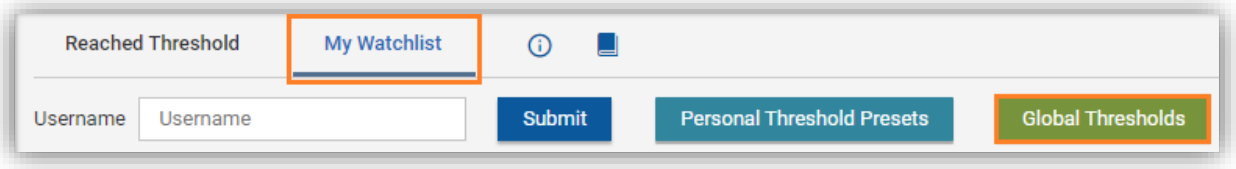

Threshold is a metric set to monitor when a certain Member win/loss amount is met or exceeded. There are two types of thresholds including **Global Threshold** and **Personal Threshold**.

Each time Member wins or loses a bet, the win/loss amount will be accrued to **Accumulated Win Loss**. When **Accumulated Win Loss** reaches a Global or Personal Threshold, you will receive notifications via **Telegram**. **Accumulated Win Loss** is reset to zero daily or when the function is turned off.

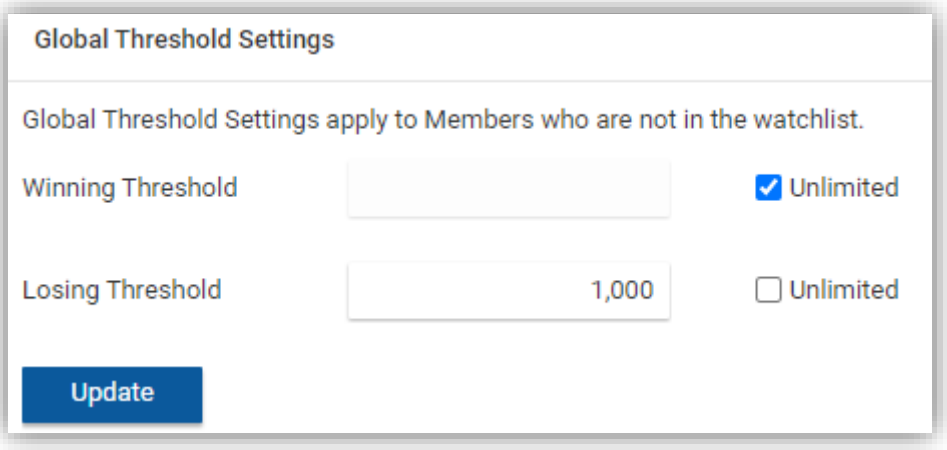

2.1. Global Threshold

Global Threshold applies to all Member accounts under Agent once it is set. When the threshold is met or exceeded, you will receive notifications.

To set Global Threshold, go to **My Watchlist** > **Global Thresholds**:

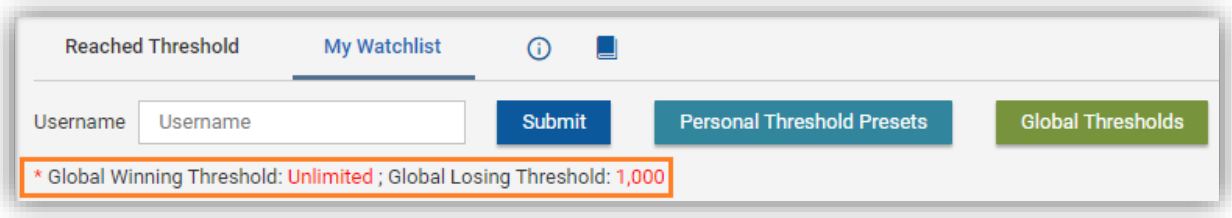

After that, you will see the **Global Threshold Settings** below:

Here is how to configure the Global Threshold:

- **Winning Threshold (WT)**: a limited threshold set to notify you when Member accumulated win amount reaches a certain point.
- **Losing Threshold (LT)**: a limited threshold set to notify you when Member accumulated loss amount reaches a certain point.
- **Unlimited**: an unlimited threshold, selecting this means you ignore the threshold and do not receive notifications. Combining limited and unlimited thresholds will get you the following results:
  - **Unlimited WT + Unlimited LT**: ignore both Winning Threshold and Losing Threshold.
  - **Limited WT + Unlimited LT**: monitor Winning Threshold and ignore Losing Threshold.
  - **Unlimited WT + Limited LT**: ignore Winning Threshold and monitor Losing Threshold.

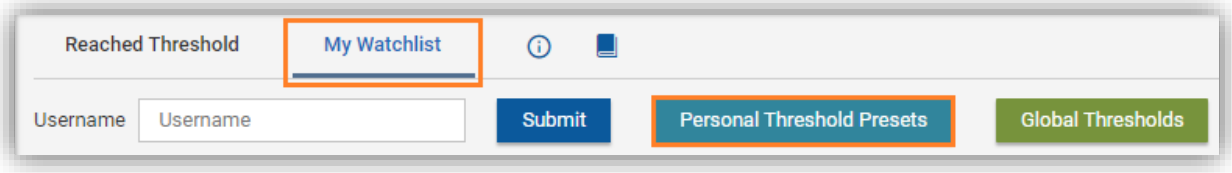

When finished, click **Update** and you will see your Global Threshold here:

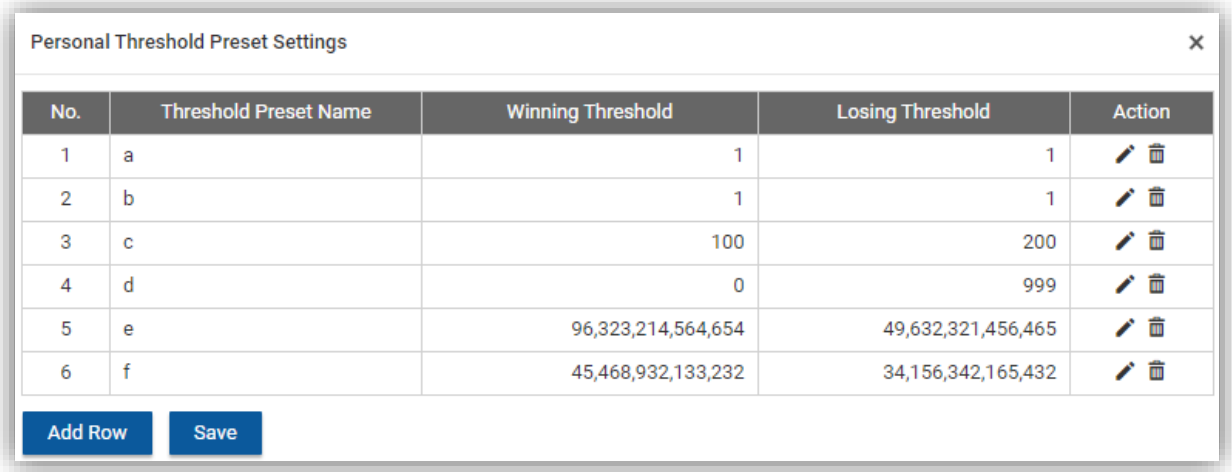

2.2. Personal Threshold

Personal Threshold is used for Member-specific monitoring. You can preset Personal Threshold and apply it to the Member account you want to monitor later.

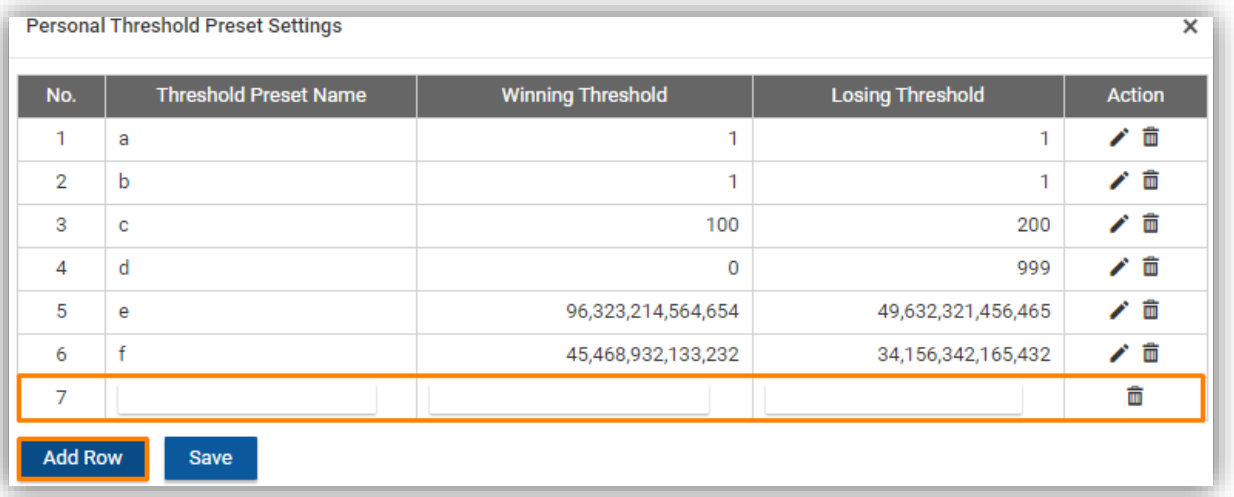

To set Personal Threshold, go to **My Watchlist > Personal Threshold Presets**:

After that, you will see the **Personal Threshold Preset Settings** below:

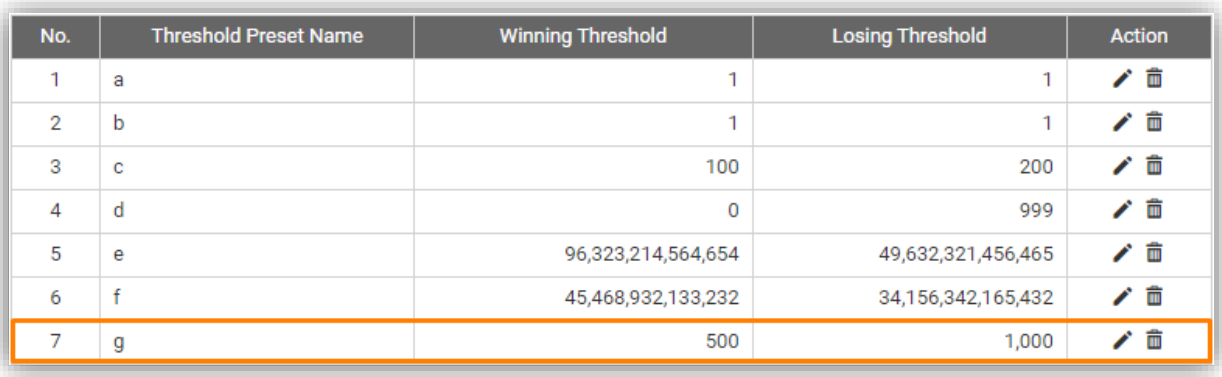

Click **Add Row** and enter the following information:

- **Threshold Preset Name:** the name of the preset.
- **Winning Threshold**: a limited threshold set to notify you when Member accumulated win amount reaches a certain point.
- **Losing Threshold**: a limited threshold set to notify you when Member accumulated loss amount reaches a certain point.

When finished, click **Save** and the new preset will be added to the list:

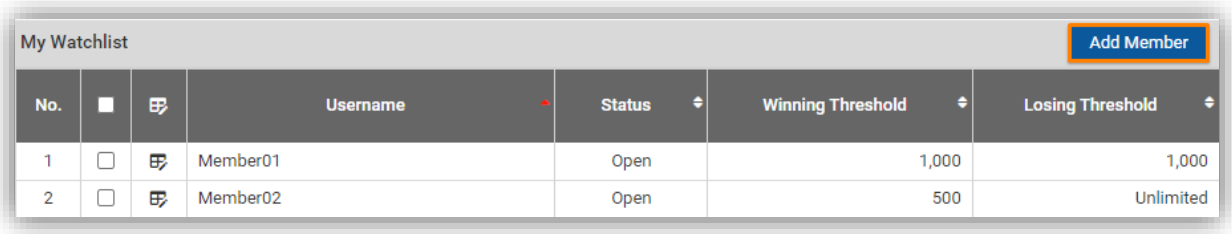

3. Set the watchlist

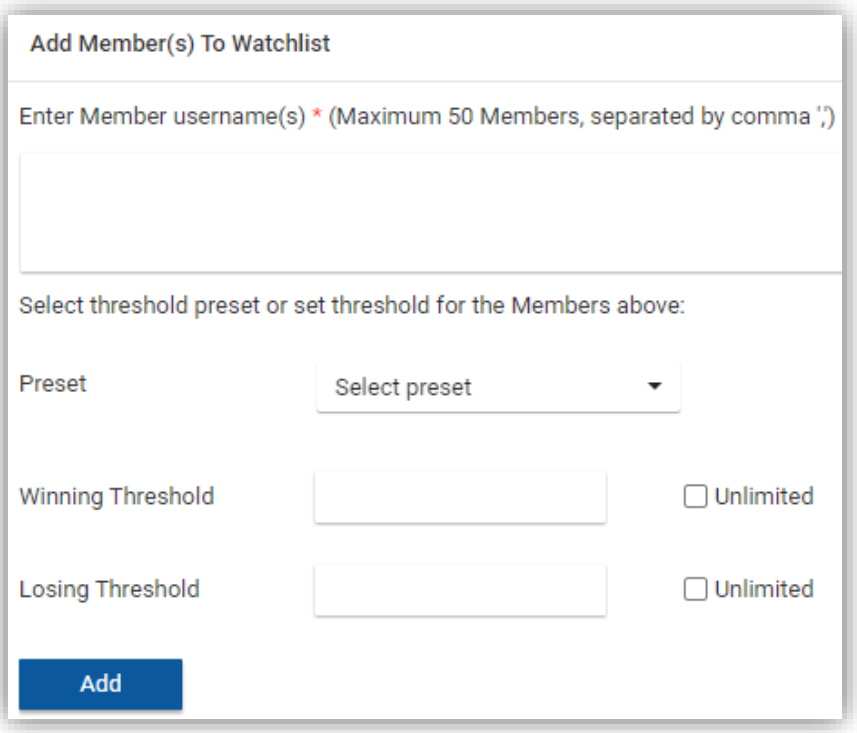

3.1. Add Member account(s) to the watchlist

With the thresholds already set up, your next step is to add the Member account(s) you want to monitor to the watchlist.

On **My Watchlist** table, click **Add Member**:

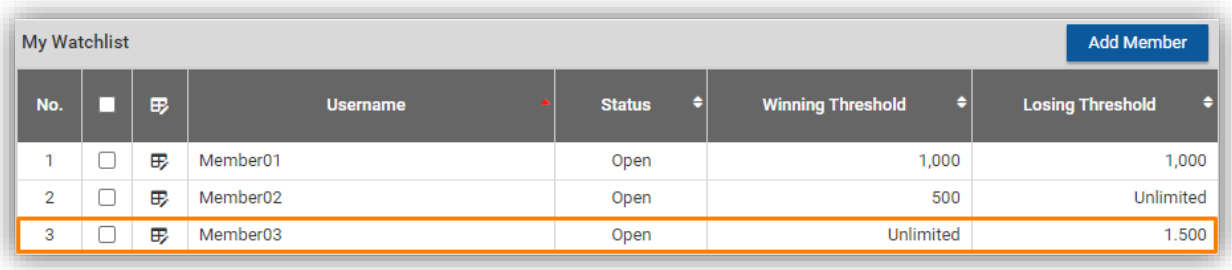

Enter the following information:

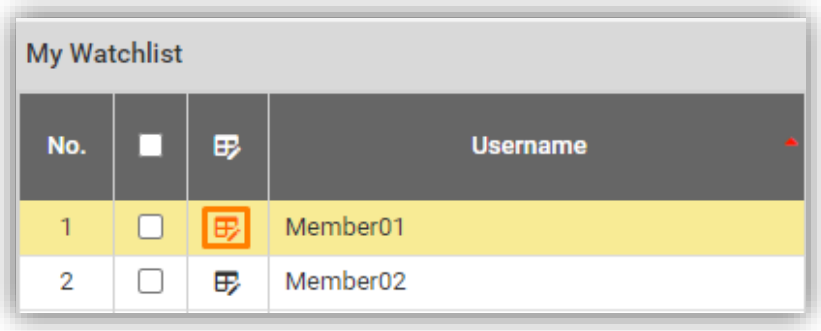

- **Member List**: a list of one or more Member accounts to apply the threshold.
- **Preset** (optional): select a Personal Threshold that you have preset previously.
- **Winning Threshold**: if you do not have a suitable preset, enter your own winning threshold.
- **Losing Threshold**: if you do not have a suitable preset, enter your own losing threshold.
- **Unlimited**: select this option if you wish to ignore the threshold.

After finishing, click **Add** and the selected Member account(s) will be added to the watchlist:

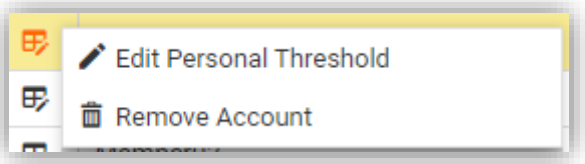

3.2. Edit/Remove a Member account from the watchlist

To edit or remove a Member account, click **Edit** (next to Member username):

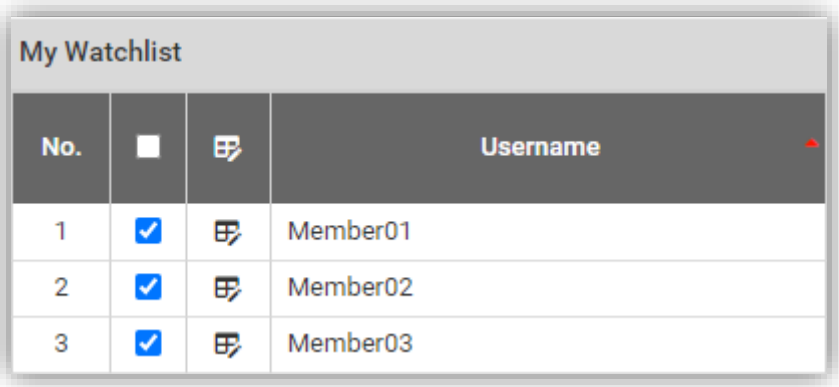

Select **Edit Personal Threshold** or **Remove Account** based on your needs:

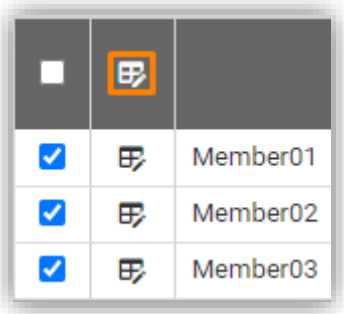

3.3. Edit/Remove multiple Member accounts from the watchlist

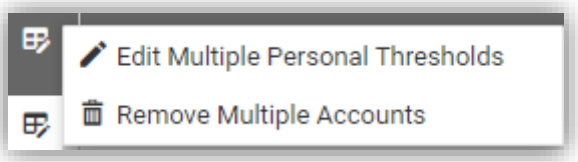

To edit or remove multiple Members, select the Member accounts:

Click **Edit** on the column header:

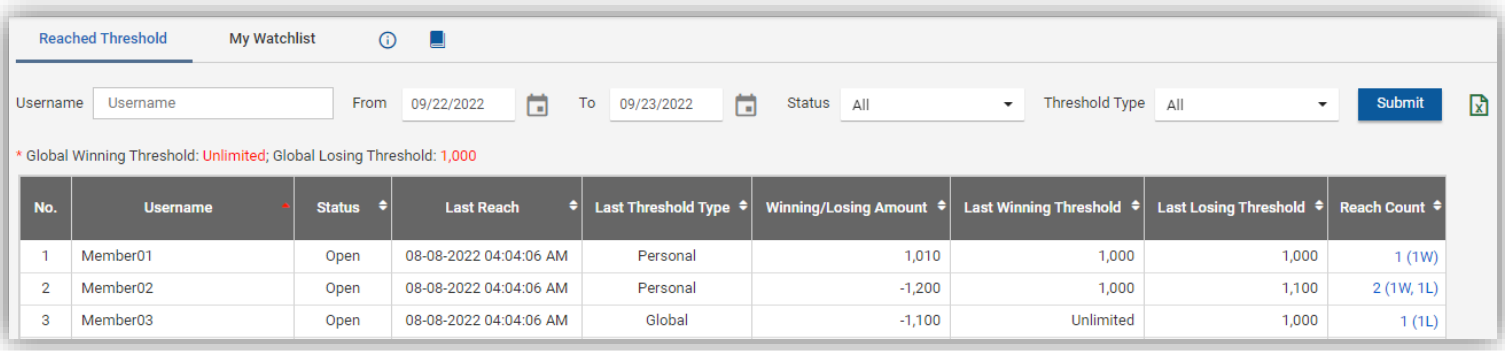

Select **Edit Multiple Personal Thresholds** or **Remove Multiple Accounts** based on your needs:

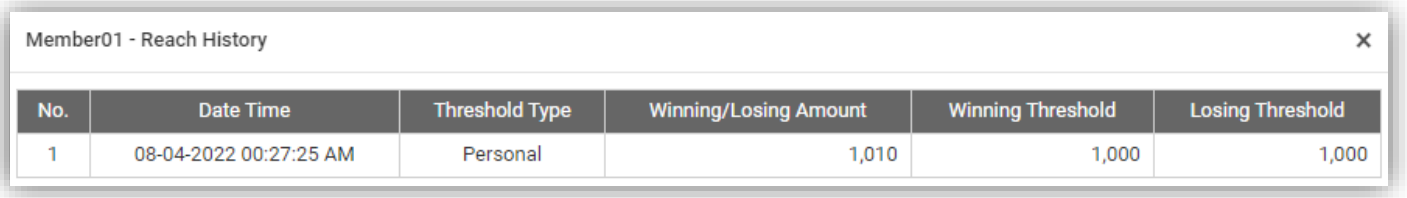

4. Monitor accounts on the watchlist

When the watchlist is created, any Member who has reached the threshold will be recorded in **Reached Threshold**:

- **Last Reach**: the most recent date/time that Member reached the threshold.
- **Last Threshold Type**: the type of threshold in the last reach.
- **Winning/Losing Amount**: Member's win/loss amount in the last reach.
- **Last Winning Threshold**: the winning threshold value in the last reach.
- **Last Losing Threshold**: the losing threshold value in the last reach.
- **Reach Count:** the number of times that Member reached the threshold. Clicking Reach Count will take you to **Reach History**:

  - **Reach History** shows a more detailed record of the times that Member reached thresholds. The numbers in **Reach History** are similar to those of **Reached Threshold**.
