MEMBER BETTING BEHAVIOR GUIDELINE

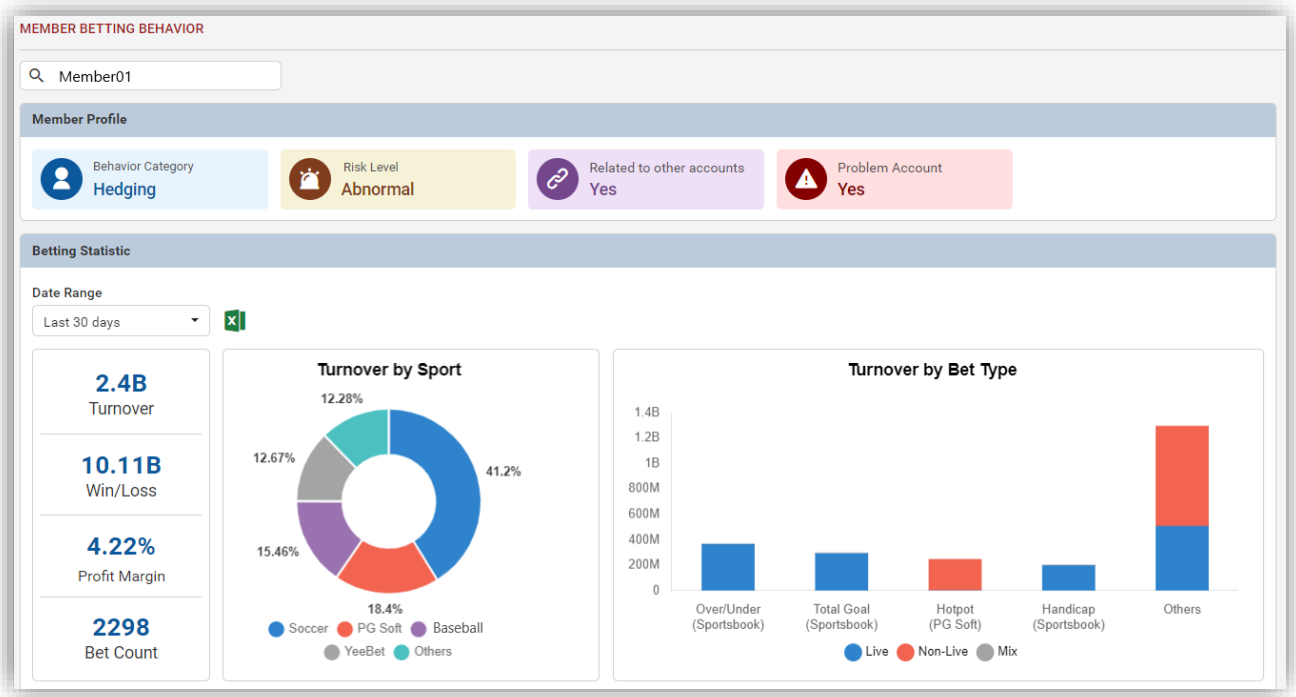

1. Introduction

Member Betting Behavior provides comprehensive insights into your Member's betting activities. By monitoring and analyzing these insights, you can identify potential issues such as suspicious activity or problematic gambling behavior, and take prompt action to address them.

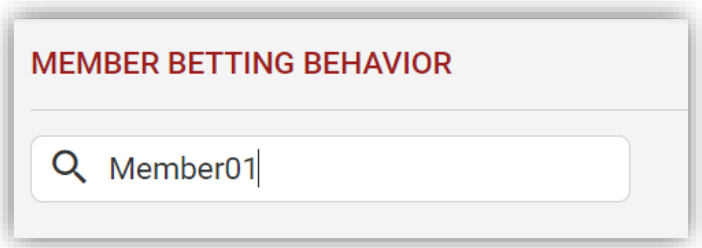

2. Member Betting Behavior instructions

To access the Member Betting Behavior report:

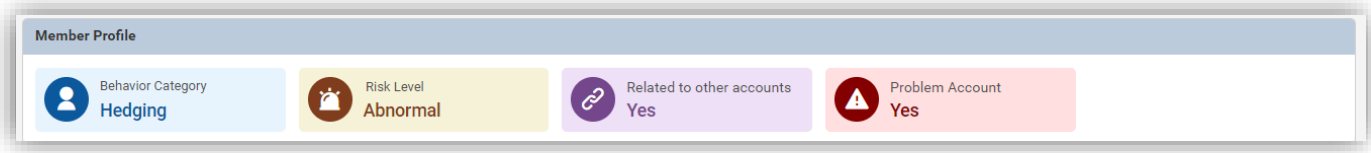

Step 1: Go to **Main Menu > Risk Management** > **Member Betting Behavior**.

Step 2: Enter the Member username.

Step 3: Press Enter to generate the report. The report is structured with two main sections:

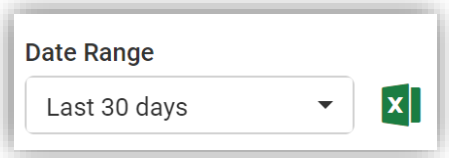

2.1. Member Profile

- **Behavior Category & Risk Level**: display the Member's current behavior status and risk level, as determined by the system.
- **Related to Other Accounts**: "Yes" means the member is connected to other accounts, potentially due to shared activities or devices.
- **Problem Account**: "Yes" indicates the Member is on the problem account list.

2.2. Betting Statistic

- **Date Range**: select your desired date range from the dropdown list. The default is the last 30 days, with options for the last 60 and 90 days.

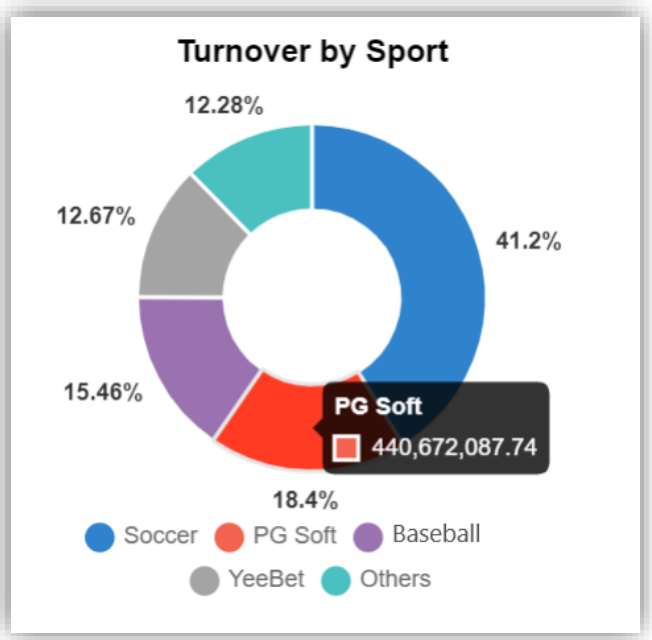

- **Excel File Export**: click the Excel file to download a detailed report of the Member's betting data.
- **Key Metrics** (regardless of ticket status (e.g., void, reject, refund))

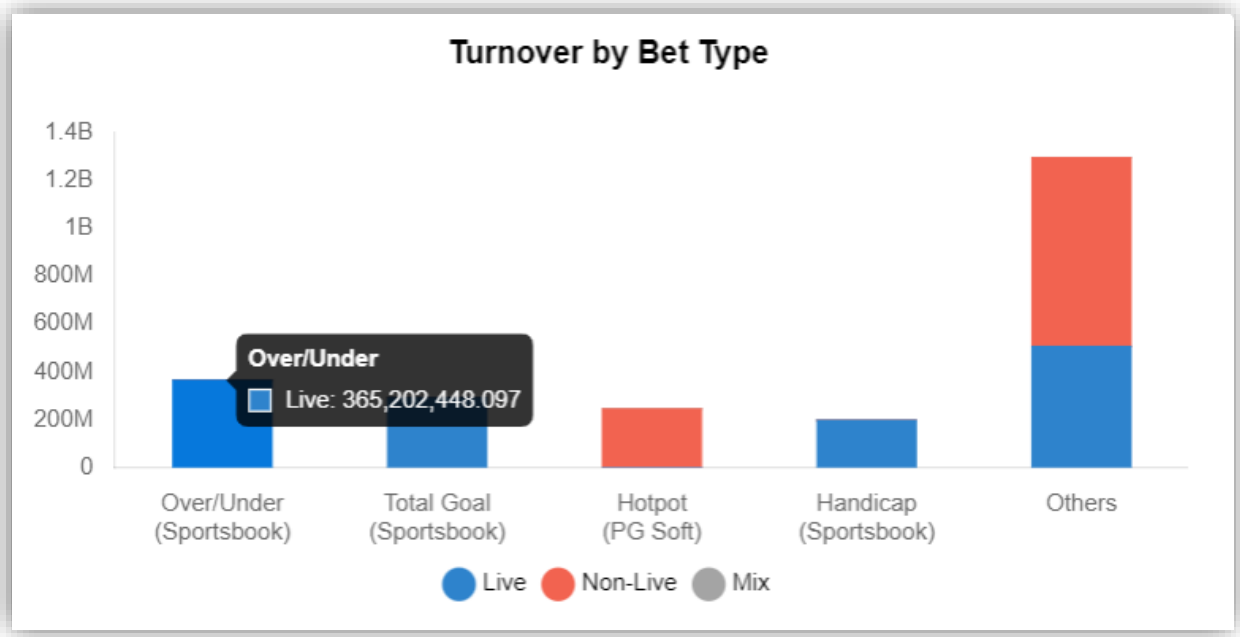

- **Turnover**: total Member betting amount
- **Win Loss**: total Member win/loss amount.
- **Profit Margin (%)**: calculated as win loss divided by turnover.
- **Bet Count**: total number of bet tickets placed.

– **Additional Insights**

➢ **Turnover by Sport**: the pie chart shows the top 4 sports with the highest total wagered amount (turnover).

➢ **Turnover by Bet Type**: the column chart shows the top 4 bet types with the highest turnover, categorized by live, non-live, and mixed events. To avoid duplicates, bet types will be displayed with product names in brackets (e.g., 1H Handicap (Sportsbook)).

- **Turnover & Win Loss by Date**: Combined charts for tracking the overall turnover and corresponding win/loss over the same date. Turnover is shown in an area chart, win loss in a line chart, using short formats (K for thousands, M for millions, B for billions) for readability.
